Product Change Notification – Satomi Edgeband

**TO:** PCS Business Partners

**FROM:** Marketing

**RE:** PCS Satomi Edgeband

As part of our continual improvement practices, we are consistently evaluating our products and suppliers to ensure we are delivering quality cabinets at the highest value possible. In keeping with this practice, our product development and sourcing teams recently appraised the color match and supplier for the Satomi finish (79A) edgeband, successfully sourcing a new material (shown in the image on the left) that is a closer match to the foil finish.

Effective July 17, 2018, our Mira Loma facility began to transition out the current edgebanding material (shown in the image on the right) and replace with the new material (shown in the image on the left). Our Dallas, TX facility began transitioning material on August 1, 2018. This material change will affect the Lenox (LX) door style and the newly launched Mission (MSF) door style in Satomi (79A). Orders with the new edgeband material should start shipping in mid to late August.

While orders will not come with mixed material and we do not foresee any product concerns as it relates to our accessories and components, any current inventory you may have on hand in this finish should be considered and possibly segregated from new inventory to ensure orders with mixed material are not installed. To accurately identify new vs. old, please refer to the “print date” or “pick date” on the labels depending on what label you are referencing (see Label Date Identification Reference Guide) and identify orders picked after 7/17/18 for Mira Loma and 8/1/18 for Dallas.

If you have any questions or concerns regarding this product change, please contact your Territory Business Manager or Customer Service.

Thank you for your continued support.
