Product Change Notification – Tsuki1 Edgeband

TO: PCS Business Partners

FROM: Marketing

RE: PCS Tsuki1 Edgeband

As part of our continual improvement practices, we are consistently evaluating our products and suppliers to ensure we are delivering quality cabinets at the highest value possible. In keeping with this practice, our product development and sourcing teams recently appraised the color match and supplier for the Tsuki1 (76W) edgeband, successfully sourcing a new material (shown in the image on the right) that is a closer match to the foil finish.

Effective May 17, 2019, our Mira Loma facility began transitioning out the current edgebanding material (shown in the image on the left) and replacing with the new material (shown in the image on the right). Our Dallas, TX facility will transition out the old material on May 22, 2019. This material change will affect the Lenox (LX) and Mission (MSF) door styles in the Tsuki1 (76W) finish.

While orders will not come with mixed material and we do not foresee any product concerns as it relates to our accessories and components, any current inventory you may have on hand in this finish should be considered and possibly segregated from new inventory to ensure orders with mixed material are not installed. To accurately identify new vs. old, please refer to the “print date” or “pick date” on the labels depending on what label you are referencing and identify orders picked after 5/22/19 for Mira Loma and 5/24/19 for Dallas.

If you have any questions or concerns regarding this product change, please contact your Territory Business Manager or Customer Service.

Thank you for your continued support.
